Verifone IntelliNAC

Transaction infrastructure made faster and smarter

Turbocharge Your Payments Infrastructure

Think of your transaction framework as if it were an engine. Is it running at peak performance? Or can the speed and capacity of your payments use a boost? Verifone IntelliNAC is a system of hardware and software engineered to cost-effectively scale your existing infrastructure without the need for expensive upgrades. It delivers unprecedented execution in high-density, multifunctional, point of sale network access control. Simultaneously route thousands of transactions quickly, securely, and reliably with IntelliNAC.

Move, Manage, and Maximize Your Transactions

Transporting transactions can be complex, requiring a great deal of security and the ability to employ diverse routes to reach multiple destinations, especially during peak periods. As a result, payment processors often need to impose rules that govern transactions unique to their businesses.

IntelliNAC recognizes this need and is fully configurable, allowing processors to incorporate specific business logic that controls how and where transactions are processed. In addition, software features enable users to further manage and personalize the experience via consolidated reporting and diagnostic functions, as well as data analysis. Get more from your existing infrastructure and maximize the way you transport transactions with IntelliNAC.

Proven Performance, Reliability, and Security

Currently deployed in over 120 countries and supporting more than 60% of global card-present debit and credit transactions, the Verifone NAC family of networking solutions has been built to the highest standards to ensure unrivaled speed and security. Its fully managed networking capabilities support all point of sale devices, providing ultimate reliability and the highest level of uptime due to its hardened design, fault-tolerant software, and redundant expansion capabilities.

Intelligent Control

Use IntelliNAC's fully configurable network management functions for business logic, and increase the speed and capacity of your current transaction processing system. The system is 100% content-aware; IntelliNAC scans various data points within each transaction and then applies client-configured rules to manage how each transaction is processed.

Simply put, IntelliNAC "peeks inside" data to determine where and how it should be processed, taking pressure off host platforms while improving speed, security, and reliability.

Full Network Visibility

IntelliView—an integrated network management and reporting system—is the software component included with IntelliNAC devices. It allows payment processors to monitor their transaction systems to ensure their infrastructure is operating at its peak performance. With IntelliView:

- Manage your IntelliNAC device(s) to easily configure how transactions are processed
- Perform key and critical functions that consolidate reporting and diagnostic functions
- Simplify your ability to implement complex configurations specific to your business

Clarity at the Transaction Level

Offered as an optional software component to the IntelliNAC solution, LogARithm captures and stores up to 50 million transactions per day. Use real-time data to generate reports and perform deep-dive statistical analyses to discover trends, monitor performance, and diagnose potential system issues, or view details regarding individual transactions. You can also:

- Set threshold alarms to avoid transport bottlenecks
- Set alerts to notify you of transaction errors
- Export data into commonly used software packages, such as Microsoft Excel and Access, for further analysis

It's easy to be different, but difficult to be better.

~5.4B

Verifone devices across the globe process approximately 5.4 billion transactions per year. With a market share of that size, we're constantly pushing ourselves to innovate and deliver.

30M

We've deployed 30 million Verifone devices worldwide, empowering businesses of all sizes to provide their customers with an interactive point of sale experience.

30Y

Verifone IntelliNAC has set the standard with proven performance and industry leadership for over three decades.

60%

Verifone's family of NAC products are deployed in over 120 countries and support more than 60% of card-present global debit and credit transactions.
